

Brian Mwai

Design Engineer

I design brands, design systems and interfaces, then build them in React and TypeScript. Nairobi, working remotely.

Nairobi, Kenya Portfolio: brn-mwai.github.io/cv github.com/brn-mwai linkedin.com/in/brnmwai info.brnmwai@gmail.com
+254 740 690099

Design engineer who owns the whole surface: brand, design system, interface and the production front end behind it. I ship AI inside the product, such as an assistant in a fleet dashboard that proposes actions for a person to approve, and I design the interface people trust enough to act on.

SKILLS

Interface design	Dashboards and consoles for several user roles, map-heavy and data-dense screens, mobile app design, marketing websites
Brand and visual	Brand identity, logos, merchandise, illustration and drawing
Design systems	One system carried across brand, product, driver app and marketing site, built in Figma and in code
Front end	React, Next.js, TypeScript, Tailwind CSS, Node.js; desktop apps with Tauri 2 and Electron; maps with OpenLayers, MapLibre and Mapbox
AI in the product	Assistants and agents inside interfaces, with a person approving anything consequential; voice interfaces; question answering over a company's own data. Claude, GPT and Gemini APIs, MCP
Tools	Figma · Blender · Claude Code · Git and GitHub · Zed · Vercel · Cloudflare · Convex · PostgreSQL

EXPERIENCE

Technical Lead and Co-founder

Jun 2026 – Present

Revlog, Nairobi · revlog.africa

- Battery collection and recycling business, seven co-founders. I own the technical side, including the interfaces field staff and partners use.
- Designed and built CycleTrack, the custody record that follows each battery from producer to offtaker: five consoles, for producers, offtakers, regulators, field staff and admin, on one Convex backend. cycletrack.revlog.africa
- Designed and built the public collection portal, where anyone can book a collection, report an unsafe battery or find a drop-off point. portal.revlog.africa

Software Engineer, contract

Mar 2026 – Jul 2026

Celeri Group, Nairobi

- Sole developer on Odyssey, a map-based tool for investors assessing transport routes in Kenya. Delivered a working demo and investor pack in about two months.
- Built the map interface across all 47 counties: routes, roads, operators, schools, hospitals and fuel stations, rendering up to 1,789 stations at once.
- Designed the data model, 22 record types, with every value recording where it came from, so each figure on screen traces to a source.

Co-founder and Design Engineer

Jul 2025 – Present

AXI Mobility, Nairobi and Delaware · aximobility.com

- Fleet management software for African transport operators. I do the design and the engineering: brand, design system, operator dashboard, driver app and website.
- Designed and built an AI assistant into the dashboard that answers questions about the fleet and proposes actions for a person to approve.
- Set up vehicle tracking that works with hardware customers already own, designed for 10,000 vehicles.
- Represented the company at the Africa Climate Summit 2025 in Ethiopia, in the African Union Young Innovation Hub.

Forward Deployed and Design Engineer

Ongoing

Independent practice, remote

- Embed with a client, model their domain, and ship the interface and AI on top of it. Sold as the deployed outcome rather than as hours. Lead engagement: Odyssey, for Celeri Group.
- Teach AI to technical and non-technical teams alongside the engagements.

Software Engineer

May 2025 – Aug 2025

Kenya Space Agency, Nairobi

- Built AIMS, a satellite-based crop monitoring tool for Murang'a County, in React, TypeScript and OpenLayers: land-cover comparison across 2022 and 2024, crop classification, weather and market prices by subcounty. Works offline, in English and Swahili.

Lead Designer

2024 – Jan 2025

Google Developer Student Clubs, The Catholic University of Eastern Africa

Founder and Designer

2023 – Present

Formartly, Nairobi

- Creative studio. Brand identity, logo and merchandise design for clients, including merchandise for Sauti Sol.

SELECTED PROJECTS

Gleam · brn-mwai.github.io/gleam

Screen buddy for Windows: ask how to do something and it zooms into your real screen, circles the exact control and clicks it for you. Champion, first of 19 teams, and winner of the Delight track, Claude Community Kenya Fable 5.1 Build Day, Nairobi, September 2026, with two teammates. Rust and React on Tauri 2.

Wispy Console

Windows workspace for building with coding agents: terminals, projects, a code graph, and a task board that Claude Code, Codex, Gemini and OpenCode write to. Designed and built in Rust and React on Tauri 2, shipped as an installer.

Wispy Desktop

Meeting assistant for Windows that transcribes both sides of a call on the device and answers questions from your own notes. Electron and React.

Rovify

Events platform on Base. Third place globally, USD 20,000, Base Batches 001, 2025, from over 1,200 entries. Winner in the Africa round, with two teammates.

Monarch · monarch-4iy.pages.dev/corpus

The instrument behind my dissertation, live with its 400-item corpus, each item's score and the predicted response drawn on the cortical surface. Open source.

Oryn · oryn.cc

Reads invoices and contracts and turns them into payment links. Third place, AI Mashinani, 2026.

EDUCATION

The Catholic University of Eastern Africa, Nairobi

2022 – expected 2026

BSc Physics, final year. Dissertation on measuring how far media leans on emotion rather than reasoning, using Meta's TRIBE v2 cortical-response model.

RECOGNITION

Design and build	Champion and Delight track, Claude Community Kenya Build Day, 2026 · Third globally, USD 20,000, Base Batches 001, 2025 · First place, Qdrant track, AI Genesis, Dubai, 2025 · Third place, AI Mashinani, 2026
Art	National top 10, Red Bull Doodle Art Kenya, 2023, from over 8,000 entries
Companies	AXI Mobility: KES 300,000 grant, Kenya Climate Innovation Center, 2026 · NVIDIA Inception · 500 Global Pre-Acceleration Academy, 2025. Revlog: Finalist, ACEP Innovation Challenge, Accra, 2026
